The most reliable (managed) turn key solution available

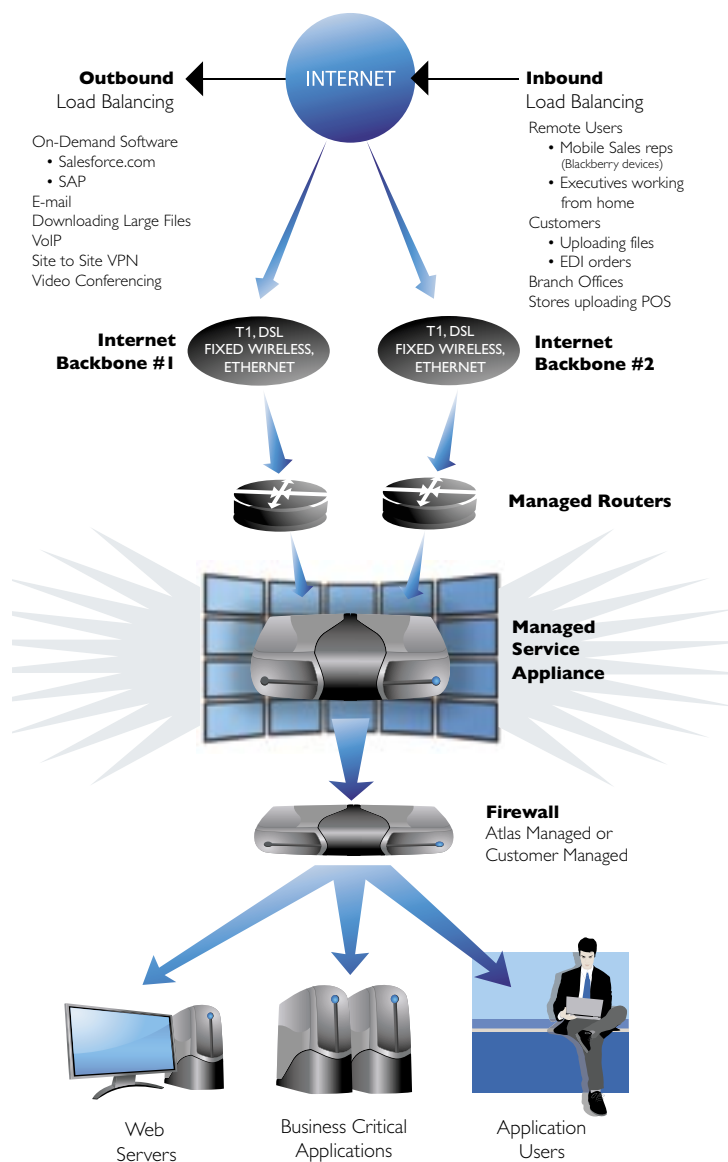

Who needs Critical Mission - Essential Connectivity Solutions?

If your company depends on your internet connections for business critical applications, or customer and employee communications and file transfers, then it is important to consider some level of managed bandwidth services.

Critical Mission™ Essential Connectivity Solutions™ are engineered for businesses who can never afford to have their internet connections down, or their networks congested, causing onsite or offsite mission critical applications to fail. Critical Mission™ services provide an economical managed services platform for you to safeguard your network from operational downtime, while providing your company with some of the industry's most powerful Load Balancing, Traffic Shaping, Network Visibility and Usage Reporting.

What managed services are available from the Critical Mission, Essential Connectivity Solutions platform?

- *Redundant Internet Connections (from multiple providers)*
- *Inbound and/or Outbound Internet Load Balancing*
- *Disaster Recovery/Offsite Redundancy*
- *Managed Firewall*
- *Intrusion Detection and Prevention (IPS/IDS)*
- *Traffic Shaping*
- *Network Visibility and Internet Usage Reporting*
- *E-mail Spam and Virus Filtering*
- *Internet Content Filtering*
- *Proactive Monitoring and Support*
- *Multi-Site WAN Management*

Why use a managed services platform?

Managed platforms spread the cost of industry leading products, software and expertise across several hundred customers, thus allowing you to get best of breed services, monitoring and reporting at a fraction of the Total Cost of Ownership (TCO) of buying and maintaining these systems and expertise on your own. Additionally, a team of certified experts are constantly monitoring and maintaining your systems and consulting with you to allow your IT team to focus on your company's profit producing projects and objectives.

Design your own managed solution with the help of our expert productivity specialists or choose from three of our more popular combinations.

- Multiple Managed T1's from different internet backbones for Inbound and Outbound redundancy and load balancing, with managed firewall services.
- Bonded 3Meg T1's and Fixed Wireless T1's for redundant diverse paths to the internet. The wireless microwave T1 link bypasses the street level wiring and local central office. This product set usually is provided with managed firewall, usage reporting, and traffic shaping services.
- Multiple T1's and high availability firewalls at the corporate hub site, with primary and secondary broadband links and firewalls at the remote sites/stores.

To get a no cost assessment of your needs call us at 800.549.6626 or e-mail us at info@atlasbroadband.com

“An Internet connection is mission critical for our web based applications along with several other processes that effect our daily operations. The reliability that this rather inexpensive solution gives us is just the edge we were looking for...”

American Red Cross

“Redundancy is the biggest benefit we got from this solution. Between our 15 offices and internal applications that heavily rely on the internet access, uptime is a must.”

Dilbeck Realty (GMAC)

“As an Investment Money Manager, network uptime is critical for us, from Disaster Recovery to our remote users on Citrix.”

First Pacific Advisors

“Instead of just doubling our Frame Relay circuit speeds, we chose the Dual WAN design because of the added redundancy benefits of using different backbones, lower costs and faster speeds...this states it perfectly, GCI is happy”

Guitar Center Inc. - 305 stores

“It’s very creative. Our connection is just too important not to have a back-up, it’s worth the peace of mind!”

Q2, Inc.

“Our network being down would cripple our operation, that’s why we went with this solution.”

Layton Printing

“This solution was a must have for our FTP, e-mail and VPN to our other sites. Our Internet connection is just too important and the additional bandwidth has been very useful.”

Monarch Litho - The largest minority-owned printer in the country and the No. 1 printer for the U.S. Government Printing Office.

“What appealed to us most was the peace of mind that our Home Banking Servers and FTP would not go down if one of the T1’s failed, along with the performance gains of using the bandwidth on both pipes.”

LAPD Credit Union

Seamless, redundant Internet connectivity is an essential business enabler for companies who must always have uninterrupted connectivity.

Atlas Broadband’s managed connectivity solutions allow you to have seamless redundancy from up to 17 different Internet backbones, load balancing to make efficient use of your capacity and ensure your applications work with the least latency, traffic shaping to assure essential business traffic has priority, and granular weekly and monthly reports so you can have visibility into everything that travels in and out of your network.

Atlas’ essential business services are used by those companies and organizations who absolutely, positively, must always have connectivity.

Increased Bandwidth

Increased Responsiveness

Increased Reliability

Atlas Broadband is a provider of managed services and a virtual network operator, or VNO providing connectivity solutions from 17 of the largest broadband carriers in the country. Atlas' success for nearly ten years has been in the area of helping companies be more productive and profitable through the use of broadband based solutions in the disciplines of Wide Area Networks, Managed Security and Compliance, VPN, WAN Optimization, and Redundant Internet Solutions. Atlas is proud to actively provide redundant WAN and managed services to some of the largest companies in the world.
